WATER CONSERVATION POLICY

Introduction: Water conservation is an essential practice that contributes to sustainable development and environmental responsibility. As a responsible institution, St. Ann's College for Women recognizes the importance of conserving water resources to minimize our environmental impact. The Water Conservation Policy aims to establish guidelines, practices, and measures to promote efficient water usage throughout the college campus.

Objectives:

The primary objective of the Water Conservation Policy is to reduce water consumption, promote water efficiency, and raise awareness among students and faculty about the importance of water conservation. By implementing this policy, we strive to minimize water waste, conserve natural resources, and foster a culture of sustainability within the college community.

Policy Guidelines:

Efficient Infrastructure:

- Measures are taken to regularly inspect and maintain plumbing systems to identify and repair leaks promptly.

Education and Outreach:

- Educational campaigns are organized to raise awareness about water conservation practices among students and faculty.
- Providing informational materials and resources on campus platforms, including the college website.

Operational Practices:

- The institution has three rainwater harvesting pits to tap the rainwater during the monsoon season. All the rainwater harvesting pits are built scientifically to store the maximum amount of water in the soil. It will raise our water table and keep our soil healthy.
- Promoting the use of reusable water bottles and reducing the reliance on single-use plastic water bottles.
- A bore well is maintained on campus to meet water requirements.

Monitoring and Evaluation:

Regular assessment of water usage data and identify opportunities for improvement. Conducting audits and inspections to ensure compliance with the water conservation policy and identify areas for further improvement.

Conclusion:

By adopting and implementing the Water Conservation Policy, St. Ann's College for Women demonstrates its commitment to sustainable practices and environmental stewardship. By encouraging responsible water usage and fostering a culture of conservation, we contribute to a more sustainable future for our college and the broader community. Together, we can make a significant impact on preserving this valuable resource for generations to come.
